DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyazaki et al. (US 2001/0034175).

Regarding claim 1, Miyazaki discloses a method of sealing a glass panel assembly by melting a seal frit which is applied between two mutually overlaid glass substrates, comprising a preliminary heat process where temperature of the glass panel assembly is increased to a preliminary temperature within a forced flow of a heating medium, the preliminary temperature being lower than a temperature at which the seal frit begins to melt, a pressure reduction process where pressure surrounding the glass panel assembly is reduced while the preliminary temperature is maintained, a sealing process where temperature of the glass panel assembly is raised from the preliminary temperature to a sealing process temperature within a forced flow of a heating medium, and a cooling process where the glass panel assembly is cooled within a forced flow of a cooling medium (Figs. 1A-1C; Pages 7-8, Paragraphs [0149]-[0171]).

Regarding claim 2, Miyazaki discloses a glass panel assembly sealing process furnace incorporating a transport mechanism as means of transporting a glass panel

assembly therethrough and melting a seal frit which is applied between two mutually overlaid glass substrates of the glass panel assembly, comprising a preliminary heating portion, a pressure reduction portion, a sealing treatment portion and a cooling portion sequentially disposed along a transport direction of the glass panel assembly by the transport mechanism, and pressure adjustment portions capable of increasing and decreasing pressure, installed between the preliminary heating portion and the pressure reduction portion, and also between the portion pressure reduction portion and the sealing treatment portion, wherein the preliminary heating portion heats the glass panel assembly with a forced flow of a heating medium to a preliminary temperature, the preliminary temperature being lower than a temperature at which the seal frit begins to melt, the pressure reduction portion decreases pressure surrounding the glass panel assembly and maintains the preliminary temperature, the sealing treatment portion heats the glass panel assembly with a forced flow of a heating medium to a sealing process temperature from the preliminary temperature, and the cooling portion cools the glass panel assembly with a forced flow of a cooling medium (Figs. 1A-1C; Pages 7-8, Paragraphs [0149]-[0171]).
